

3200 SERIES

SUPER HYDROPHOBIC NANOTECHNOLOGICAL COATING **ANTICORROSIVE**

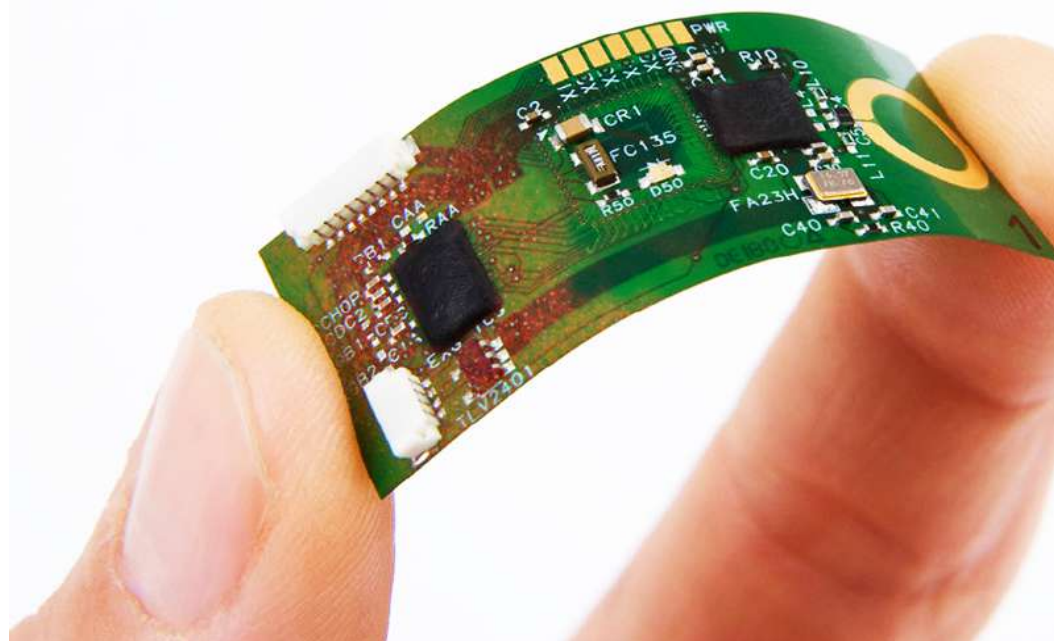

Nanoshield
SUPER HYDROPHOBIC TECHNOLOGY

TECHNICAL DATA

- Water contact angle. 150°
- Durability 5 - 10 years
- Coverage.....10 - 12m²/L

The **3200 series** provides an effective solution for the protection of electronic components against corrosion processes; forming an invisible barrier that allows passivation against aggressive agents. Without causing any interference in the operation of electronic equipment or alteration of the conductivity and resistivity values of the metal.

Features

- One-part nano coating
- Non-toxic nano coating
- Excellent hydrophobic properties
- Transparent coating
- Excellent adhesion and good abrasion resistance
- Inhibits the initiation of electrolytic corrosion reaction
- Unique UV properties
- Excellent acid and alkali environments
- Resistant to highly saline environments

Applications

- Electronic components
- Electronic devices
- Electrical and electronic equipment for industry and home, etc.
